Provide Consolidated Cloud Services to Your Business Users

Enterprises are increasingly looking to provide Public Cloud based IT Services to the users. However, they are struggling to offer a single window based access to all the different infrastructure including private cloud, public cloud and legacy systems, while also keeping track of usage details, applying quotas and other policies. This increases the manual effort manifold to manage the diverse resources while the dissatisfaction of the users keep rising.

Nuvelink Cloud Service Aggregator

Nuvelink allows corporate IT teams to offer IT-as-a-Service by providing a unified view of all the various IT resources.
Features

- **CLOUD SERVICES CATALOGUE**

![Diagram showing the integration of Business Unit Admin, Enterprise Admin, Service Manager, Custom/3rd Party, Nuvelink, Private Cloud, Amazon Web Services, Windows Azure, Private Cloud, and OpenStack-based Clouds.]

**Key Benefits for an Enterprise**

- Self-service single window mechanism for Employees to choose the Cloud services
- Go beyond VMs and access the complete portfolio of services offered by the Cloud vendors
- Choose between multiple Cloud vendors – Infrastructure or Application
- Offer Packaged Cloud Services (Databases, Remote Desktops, VMs, Machine Learning etc)
- Track usage per user / project teams or Business Units
- Integrate with Showback / Chargeback systems
- Integrate with Active Directory for SSO

**About Nuvepro**

Nuvepro aims to make the task of the Enterprises simpler by doing the heavy lifting in integrating with the Cloud, so that Enterprises can easily connect to the Cloud of their choice, the Right Cloud. Nuvepro’s products enables deployment of a multi-sourced Cloud Services Catalogue (private, public and hybrid clouds) that is available on-demand and provide high levels of service automation from a single window.
